DETAILED ACTION

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after allowance or after an Office action under *Ex Parte Quayle*, 25 USPQ 74, 453 O.G. 213 (Comm'r Pat. 1935). Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, prosecution in this application has been reopened pursuant to 37 CFR 1.114. Applicant's submission filed on 9/6/06 has been entered.

The application has been examined. Claims 1-5 are pending in this Office Action.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) and the Intellectual Property and High Technology Technical Amendments Act of 2002 do not apply when the reference is a U.S. patent resulting directly or indirectly from an international application filed before November 29, 2000.

Art Unit: 2166

Therefore, the prior art date of the reference is determined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

3. Claims 1-5 are rejected under 35 U.S.C. 102(e) as being anticipated by Fenner et al. ('Fenner' hereinafter), USP, 6,243,328.

With respectfully claim 1,

Fenner teaches a recorded signal output device to reproduce a recorded signal from a recording (see col. 1, lines 6-15);

Fenner teaches a video output to provide the textual data to the display unit (see col. 2, lines 58-60 et seq);

Fenner teaches a memory to store a textual recording name of the recording and indicating data, obtained from said recorded signal output device, that can be used for identification of the recording (see col. 8, lines 1-5);

Fenner teaches a communication device, occasionally in communication with the remote database, to obtain the textual recording name by sending the indicating data to the remote database (see col. 8, lines 40-50 et seq); and

Fenner teaches a controller, coupled to said recorded signal output device, said video output, said memory and said communication device, to control said apparatus to

Art Unit: 2166

play back the recording regardless of whether said communication device is in communication with the remote database, to repeatedly try to establish communication with the remote database unit communication is established (see col. 8, lines 40-45 et seq), to query the remote database using the indicating data when communication is established and to supply the textual recording name of the recording from the remote database to said memory (see col. 1, lines 47-49).

As to claim 2,

Fenner teaches wherein the communication device is a cellular two-way network interface (see col. 7, lines 60-65, Fig. 8 et seq).

As to claim 3,

Fenner teaches wherein the communication device is an 802.11a network interface and said apparatus is mounted in an automobile (see col. 8, lines 20-31 et seq).

As to claim 4,

Fenner teaches wherein the communication device is an 802.11b network interface and said apparatus is mounted in an automobile (see col. 8, lines 40-42).
